

Rollback to a previous version of myCNC software

In case you are having issues after updating to a new software version, or would simply rather use an older version, you can use the following instructions:

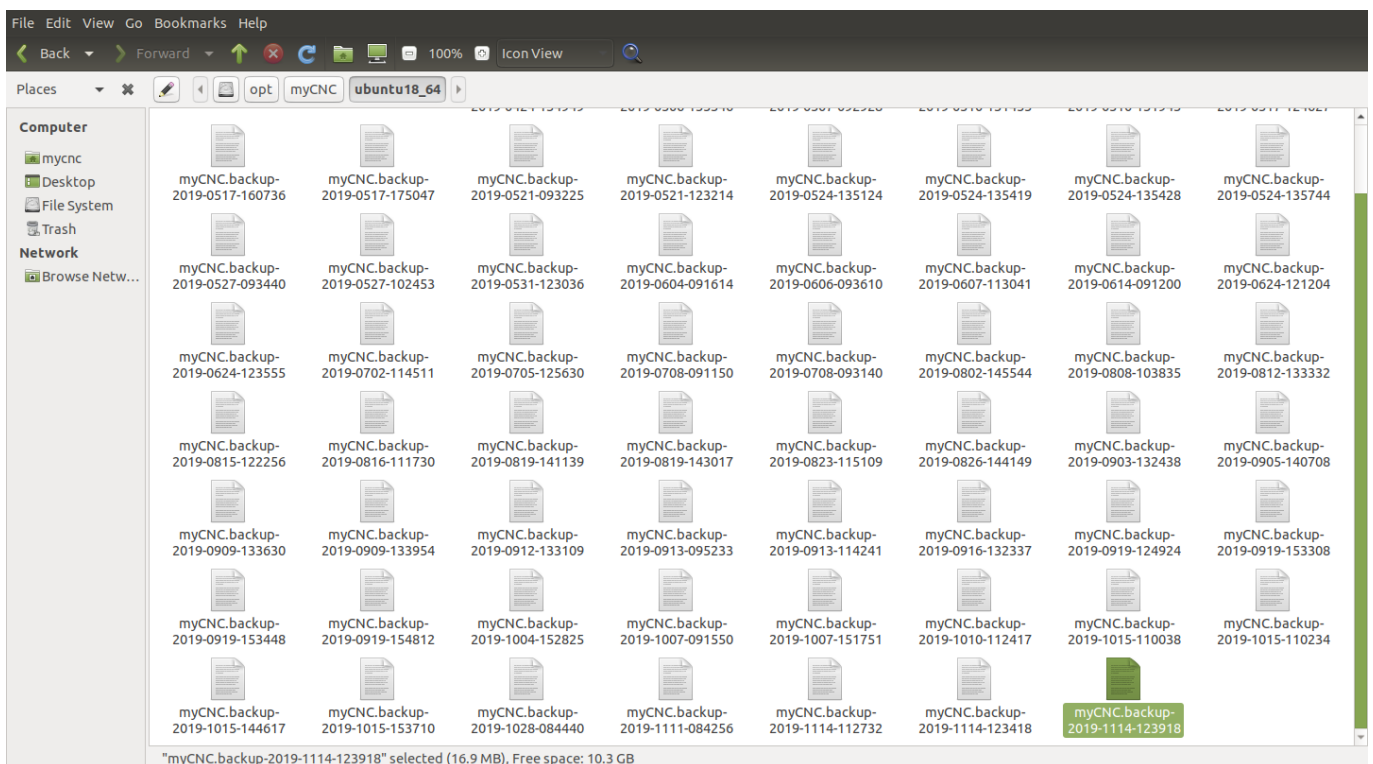

- Head into the folder containing the myCNC application (/home/opt/myCNC on Ubuntu machines)
- Select the folder in which the launch file for the myCNC application is located (ubuntu18_64 in this example)

- Delete the file named myCNC (this is your current program version)

- Locate the backup file with the date to which you would prefer to roll back

- Rename that file to myCNC
- Launch/relaunch the myCNC application

The program should now be using the backup version.
